## COMMON REFUGE:

A common refuge is a single field that serves as a refuge for both above-ground pests (e.g. corn borer) and below-ground pests (e.g. corn rootworm) at the same time. The refuge can be within the B.t. field or immediately adjacent to it.

## SEPARATE REFUGE:

A separate refuge is an option that requires two fields—one field which is adjacent to or within your B.t. field that serves as a refuge for belowground pests (e.g. corn rootworm) and a separate field (up to 1/2 mile away) that serves as a refuge for above-ground pests (e.g. corn borer). Several options/configurations not shown.

*\*Provided as a summary only. Growers must read the IRM/ Grower Guide prior to planting.*
